ABSTRACT OF THE DISCLOSURE

~~A suction piece for a device for administering an injectable product, said suction piece (4) including:~~

- ~~a) — a suction chamber (V, 6) comprising a chamber opening rim via which said suction piece (4) may be placed on a tissue (10);~~
  - ~~b) — a connection part (5) in order to produce a mechanical connection to said device; and~~
  - ~~c) — a first passage (7) extending through said connection part (5) into said suction chamber (V, 6), in order to produce a fluid connection between said suction chamber (V, 6) and a product reservoir (2) of said device;~~
  - ~~d) — wherein the pressure in said suction chamber (V, 6) may be reduced, when said chamber opening rim is placed on said tissue (10), in order to suction said tissue (10);~~
- BR

ABSTRACT

A suction piece for a device for administering an injectable product, the suction piece including a suction chamber having a chamber opening rim via which the suction piece may be placed on a tissue, a connection part in order to produce a mechanical connection to the device, a first passage extending through the connection part into the suction chamber in order to produce a fluid connection between the suction chamber and a product reservoir of the device, wherein the pressure in the suction chamber may be reduced when the chamber opening rim is placed on the tissue in order to apply suction to the tissue.
